

ABSTRACT

A graphical user interface provides a series of nested spherical surfaces representing a surface and/or human development at differing times in history and prehistory. An embodiment of the present invention, a knowledge web (K-Web), comprises a new, “multiple-intelligences” learning tool aimed at encouraging depth of thinking and understanding in numerous content areas. The K-Web optionally does this by presenting content in a dynamic, webbed structure that is readily accessible in many different ways to many different intelligences and cognitive styles.
